“What is a sports car? No more than a vehicle to be driven for sheer enjoyment and in earlier Jaguar days, one accepted certain penalties as part of the fun...”

Driving a classic Jaguar is in itself a rather pleasant and yet exciting experience. On hot Summer's days, blasting along quite country lanes, with the wind in your hair and the sun on your back. The hedgerows seem to breath in to let you past and the wild flowers bow in your wake as the rush you make pulls them in....

However, that was then and this is now! Today's choked roads can mean hours at a standstill, emergency braking becomes altogether too frequent and a breakdown truck can often bring an unwelcome end to a much anticipated day's fast driving.

So that in mind we welcome you to the SNG Barratt Special Tuning Catalogue. Intended as a guide to mildly uprating your Jaguar to increase performance, safety and possibly even reliability, rather than to produce an all out racing car!

Each item, conversion or kit listed within these pages is tried and tested and in many cases has several years of dependable service to their credit. The vast majority of these are suitable for DIY fitment by an experienced

home mechanic. However, one or two call of them for more advanced mechanical knowledge and workshop facilities. Therefore we have graded each item to show the level of skill required to fit it. Hopefully this will ensure that you are able to fit the parts that you buy or are able to find someone who can in advance of purchase. Most of our conversion kits are supplied with full

Easy to fit- recommended for any competent DIY mechanic.

More complex to fit- recommended for more advanced DIY mechanics.

Very complex to fit- recommended only for professional technicians with extensive classic Jaguar experience.

instructions, however should you encounter a problem with any of these products our sales team are always available for technical support. Should they not be able to provide the information you need, they will liaise with the manufacturer to ensure that your query is quickly answered.

Brake Caliper Conversions

Have you ever jumped out of your modern family saloon straight into your classic Jaguar and been scared witless by the lack of stopping power? It is a fact that many classic Jaguars were fitted with braking systems that often struggled to cope with the weight and sheer power of the car they were fitted to.

Obviously in the past thirty or so years the methods employed and the standards expected have changed considerably. Now SNG Barratt can provide an upgrade for most popular old style braking systems that will allow you the luxury of stopping when you want to!

Four piston front caliper conversion

Utilising the original solid brake discs and brake hoses makes this a quick and easy conversion to fit. Having four stainless steel pistons housed within a solid XJ style caliper they offer not only the benefit of greater braking power but also greatly increases the pad area contacting the brake disc.

Stainless Steel Brake Piston & Cylinder Assemblies

Due to the fact that brake fluid is prone to absorbing moisture from the atmosphere, over a period of time. Dunlop type brake piston and cylinders that have stood idle tend to rust and seize. This leads to leaking cylinders due to ripped seals or at worst a totally seized caliper. These pistons and cylinders are entirely composed of high quality stainless steel and are ready assembled with seals to bolt straight on.

**E-Type Up-rated
Anti Roll Bar Kits** 

Any E-Type that is put through its paces will exhibit an alarming tendency for body roll. Fitting better quality dampers will help to a certain degree but to cure it totally you need to fit a stiffer anti roll bar to the car. The kits that SNG Barratt provide will give the suspension the extra rigidity the standard bars lacks. Fit these, and you will soon be going round corners on four wheels instead of two!

E-Type S1/2	front	SBS1065
	rear	SBS1090

E-Type S3	front & rear kit	SBS1089
------------------	------------------	---------

**MK2/V8 Front
Suspension Handling Kit** 

Simply a great kit for improving the road holding ability of any MK2. The kit features dual rated front coil springs as well as a 1 inch diameter anti roll bar. Requiring no structural modification to the car it can

be fitted in just a few hours, leaving you to make your choice of adjustable performance shock absorbers for the ultimate in MK2 fast road performance!

Part number SBS1071

**MK2 Rear Suspension
Coil Spring Kit** 

The rather outdated rear leaf spring arrangement used on the MK2 has always meant that the both the ride quality and the handling left a lot to be desired under certain driving conditions. SNG Barratt can now supply a conversion that will dramatically change the suspension geometry allowing the car to be fitted with conventional coil springs.

Obviously, fitting coil springs to a car that was originally fitted with leaf springs is quite a feat of engineering, and not something to be attempted by the faint hearted as a considerable amount of welding and cutting is involved. To help you along, a jig is supplied (surcharge refundable) as well as step by step instructions and detailed photographs.

Part number SBS1069

**E-Type Polyurethane Steering Rack Mountings**

Stiffer with improved durability to keep you in line however out of line your driving gets!

Wider Rimmed Wire Wheels

Wider rims, wider tyres- wider tyres, more grip and better cornering! Plus they look great!

SNG Barratt have been selling Dayton Wire Wheels which are made by skilled craftsmen in the USA for several years now. In that time we have found that our customers are not only thrilled by their price, but also by the quality of their construction too! If you're thinking of fitting chrome wire wheels to your Jaguar or replacing a set that have seen better days, take a look at this list of Dayton features before you decide which wheels to buy!

a) Stainless steel spokes which cannot rust and have twice the fatigue resistance of chrome-plated spokes.

b) Swaged spokes, which are thicker at the hub and tapered to the rim. The swaging process gives the spoke a smooth, brilliant finish, provides more even distribution of stress, and allows the use of more spokes for added strength.

c) Four-layer nickel-chrome plating for greater durability and corrosion resistance.

d) Custom designs with the bolt circle and centre locating hole precisely machined to each vehicle's original wheel specification for smooth running.

e) Expert polishing of all parts. Rims are polished on both front and back sides.

f) Fully tested designs to the Society of Automotive Engineers' specification J328 for fatigue resistance.

g) Each wheel is hand-tightened and gauged for concentricity. Spokes are pre-loaded with even tension for

durability and precise wheel alignment. Periodic retreating and retightening are not required.

h) Three year comprehensive manufacturer's warranty.

Upated Driveshaft and Propshaft Universal Joints

Mainly due to the torque that is produced by any Jaguar engine, you tend to find that standard universal joints quickly wear if the car is used in an enthusiastic manner. To counter this problem we can now offer modified universal joints made by the original manufacturer, which will outlast the standard ones by miles and miles!

Propshaft universal joint JLM823U
Driveshaft universal joint JLM9639U

Improved Rear Suspension Cradle Mountings

Our improved mountings replace the original rubber compound with neoprene, which has the advantage of greater durability, without detracting from the original ride comfort of the vehicle. In addition to this you can expect to benefit from better handling as the stiffer mountings decrease the amount of flex at the rear suspension cradle during acceleration.

"1960's Jaguars were made for the open road, alas nowadays this often means an open bonnet"

Kenlowe Thermostatically Controlled Electric Fan Kits

Clouds of steam and gushing water is the last thing you need in the Summer Bank Holiday traffic somewhere between home and the coast. Embarrassing and often costly, not to mention a waste of your time and effort with the picnic hamper. During the 60's, the roads just weren't as congested as they are today, cars weren't designed to stand in near stationary traffic for long periods of time. Of course the passage of the years does nothing to help an already antiquated cooling system and the only sensible way forward is to fit a Kenlowe Fan Kit. This will allow you to thermostatically preset the point at which the fan activates to cool your engine and calm your nerves. Blower fans are fitted in front of the radiator to supplement the original fan and suction fans fit behind replacing the original system

E-Type/S-Type blower	SBS1219
E-Type V12 suction	SBS9592
E-Type S1 to 1968 suction	SBS1220
E-Type S1/2 1968 on suction	SBS1300
XJ6 S1,2 & 3 blower	SBS1217
MK2/420/XK120/140/150/ MK7/8/9 blower	SBS1341

Extra Capacity Radiator Assemblies

While you are in the process of solving your Summer cooling problems why not take the initiative and fit an extra capacity radiator? The 25% greater cooling efficiency will ensure that the thought of lines of stationary Bank Holiday traffic will no longer fill you with dread!

XK120	C3463/2U
XK140	SBS1301
XK150	C12922U
E-Type S1 3.8	SBS1287
E-Type S1 4.2	C24252U
E-Type S2 4.2	C28274U
E-Type S3 V12 Manual	SBS1283
E-Type S3 V12 Auto	SBS1284

Silicone Hose Kits

These hose kits are suitable for both fast road and motorsport use. Their superior performance reduces the risk of component failure and enables higher temperatures and pressures to be maintained with complete confidence.

E-Type S1 3.8	HK006S
E-Type S1 4.2	HK008S
E-Type S2 4.2	HK010S
E-Type S3 V12	HK009S
MK2 3.4/3.8/340	HK011S
XK120	HK010S
